8. What is not yours
9. Common questions

Mindgate Performance Management System For anyone with people reporting to them. Version of 30 September 2026.

1. Signing in

Same as everyone else: your work email, and the password HR gave you. **The first time you sign in the system stops and makes you choose your own password** — there is no way past that screen, and the new one must be at least 8 characters. Change it later with **Password**, top right. There is no self-service reset; HR does resets.

You will see at least two tabs across the top: `Self` and `Manager`. Your own KRAs, your own appraisal and your own timesheet live under **Self** — you are an employee too, and the Employee Manual covers that half. This manual covers the **Manager** tab.

If you also head a department you will see a third tab, **HOD**, which is a different job: acting on a whole department rather than on your own reports. It sits behind its own permission.

2. The Manager menu

Menu item	What it is
Manager Dashboard	Everything your reports owe, and everything they are waiting on **you** for.
Team Overview	One grid: where every report stands on every stage.
Team KRA Sheets	Approve, return or edit your reports' KRA sheets.
Team Target Achievements	Your reports' target achievements for the year.
Team Mid-Year	Their mid-year checkpoints.
Team Evaluation	Where you write the annual evaluation.
Team Competencies	Assess each report against what their role needs.
Timesheet	Their compliance, and the KRA mapping session.

Connects is not in this list — it sits under **Self**, because the page is two-sided: the same screen shows the connects where you are the employee and the ones where you are the manager.

Start at Manager Dashboard. It is the only screen that tells you what is blocked *on you*. Everything else is a place you go once it has sent you there.

3. Team KRA Sheets — approving the year's goals

This is the first thing you owe your team in a new cycle. Nothing else in the year works until their KRAs exist.

Open **Team KRA Sheets**, pick a report, and read what they have written. You have three choices:

- **Approve** — the sheet is agreed and the cycle can proceed on it.
- **Return for edits** — sends it back with **your comment**. Write a real instruction, not "please revise": the comment is the only thing they see telling them what to fix, and it shows on their screen as *"Your last comment"*.
- **Save changes** — you can **edit a submitted sheet directly** rather than bouncing it back. Use this for small corrections you would only have to explain twice. Use *Return for edits* when the thinking needs to change.

Weights must total 100. If a report has pulled KRAs from their role's published shelf, remember the shelf is a menu and does not itself total 100 — they pick a hundred points' worth from it. Check the total before approving.

Look at what is measurable. A KRA with no metric and no data source is one you will both argue about in March. The KPI column is where that gets settled now.

4. Team Overview, Target Achievements, Mid-Year

Team Overview is a single grid of your reports against the stages of the cycle — KRAs, Connects, Dev Plan, Aspiring Career, Annual Review, Manager Eval — with *Not set* where nothing exists yet. Use it to find the gaps; use the Dashboard to find what is yours to clear.

Team Target Achievements shows what each report is aiming at for the year and the role they want next. Worth reading before a Connect.

Team Mid-Year is the halfway checkpoint against each KRA. Your reports rate and comment on themselves; you do the same. **The overall is computed from the per-KRA ratings — you do not type it.** That is deliberate: the overall should follow from the parts, and it stays traceable to them.

Connects (under Self) records the conversation: achievements, blockers, feedback, and which KRAs it touched. Both of you can see and add to it. Keeping these current is what makes the annual evaluation a summary rather than an invention.

5. Team Evaluation — the annual assessment

Open a report and you get their annual review beside your evaluation form.

What is on the screen:

- **Their write-up**, and their **self-rating**, per KRA — so you are rating the same thing they wrote about, not your memory of the year.
- **Rate each KRA.** The **overall rating is computed from these**, not typed.
- **Strengths** and **Improvement areas**.
- **Potential** (annual cycles) — four questions, each 1 to 5: learning agility, leadership, ownership, readiness for a bigger role. With your Team Competencies ratings they make the potential axis of the 9-box. It is not a second performance score.
- **Submit evaluation** when it is finished.

The AI drafting button — "Copy into fields (then edit)". The system can draft strengths and improvement areas from what it already holds. Two things about it, and please take them seriously:

- **It is a draft, and it is labelled as one.** It copies into the fields precisely so you edit it. Anything left unedited goes out under your name, about a real person, into a record that affects their increment.
- **It never sets a number.** Every rating, score and distribution in this system is computed or typed by a human. The AI writes sentences and nothing else.

Your work saves as you go (**Saving… / Saved** ✓), so a lost connection does not lose the paragraph you just wrote.

6. Team Competencies

Assess each report against what their role requires, with an example of what "good" looks like at each level. They rate themselves separately, and **the screen shows you where your view differs from theirs** — which is the useful part, and the thing worth talking about in the next Connect rather than discovering at year end.

7. Timesheet — compliance, and the mapping session

Two tabs: **Compliance** and **KRA coverage**. Click any report to open their full record.

Compliance

Whether your reports filled their timesheets, with a Red / Amber / Green marker. Chasing this is ordinary management work and needs no explanation.

KRA coverage — the mapping session

This is the screen that is yours and nobody else's. Your reports can see every number on it but cannot change any of it; HR can see the backlog but does not do the mapping. **The manager decides which KRA each logged item serves**, because you are the only person who knows.

Open a report, choose **KRA coverage**, and work down **"What was logged — and which KRA it serves"**.

Since 22 October, a log whose **Log Title** in the uploaded timesheet is one of the person's KRA titles is already placed — chip **By Log Title** — and has no dropdown: to move it, HR corrects the Log Title and uploads again. A Log Title that is not one of their KRA titles is flagged in amber and left for you to map. Everything else works as below. Each remaining item has a dropdown:

- **Pick the KRA this serves** — the hours go to that KRA.
- **Not KRA work** — the hours are deliberately left out of the coverage figure. **This asks you for a reason on the screen** (*"Why is this not KRA work?"*) and will not save without one. That is on purpose: excluded hours disappear from someone's coverage, and a year later the reason is the only thing that explains it.
- **undo** clears a pending choice.

Then **Save N mappings**. Two details:

- **The chip on an item shows the *saved* state, not your draft.** A pending choice is labelled unsaved until you press save.
- **"Saved together — if one is refused, none of them is written."** The batch is all-or-nothing, so you never end up with half a session applied.

What the numbers mean

Number	Meaning
Hours placed	How much logged time is attached to a KRA.
KRA coverage	How much of the sheet, **by weight, not by count**, was worked on.
Effort alignment	How closely the hours matched the weights you both agreed.
Timesheet compliance	Whether they filled the timesheet at all.

Three things the screen will do that surprise people

"Ambiguous". An item whose words matched **more than one** KRA is given to **neither**, and both candidates are named. The system will not guess between two of your KRAs — that is your call. These are the items to clear first, because they hold hours hostage.

"Not measured from timesheets". A KRA can be declared unmeasurable from logged hours — a customer-satisfaction score, say — with the reason shown beside it. Such a KRA is **not offered in the dropdown**, so you cannot park hours against it by accident. *Today that declaration is set in the data by HR, not from this screen.*

"This person has no KRAs for this cycle". No amount of mapping will help. Their objectives have to exist before their hours can be placed against them — go back to **Team KRA Sheets**.

Closed months, and the override

Once HR closes a period it appears under **Closed months**. A settled month **keeps the numbers it was closed with even if a KRA is reweighted or an item is remapped afterwards** — that is what makes it safe to carry into calibration.

If a settled month is wrong, you can **Override** it (the button reads **Change** on a month already overridden):

1. Enter the score, or the grade, you believe is right.
2. **Give the reason.** The box is on the screen before you save and the save will not go through without it.
3. Save.

The reason then shows against that month, with your name on it, to you and to the employee. **Remove the override** puts the computed figure back.

Use this for what the timesheet could not have known — work done in a client's own tracker, a secondment, a month of firefighting nobody logged. Do not use it to smooth a number you simply dislike: the override is visible, attributed and permanent in the record.

8. What is not yours

Worth knowing so you do not go looking:

- **Salary and increments.** Increment Simulation sits behind its own permission, held by HR. You will not see it, and that is deliberate.
- **Publishing ratings.** HR publishes; until then your report's *My Rating* stays greyed out.
- **The 9-Box grid** of your own team is under **Manager → 9-Box Grid** (a Delivery Head's departments under **HOD → 9-Box Grid**). Your reports never see their box, and you never see your own. The actions publish creates for your team — a development plan, coaching within 30 days, 60-day goals — are on its **Actions** tab; close each with a note.
- **Closing a timesheet period.** HR does that. You override afterwards if you must.
- **The KRA Library.** HR publishes the shelves; your reports pick from them.

9. Common questions

A report's reporting line changed to me mid-cycle. Their open records moved with them. You do not need to recreate anything.

"Access denied" on a page. The message names the permission that was missing — send that wording to HR rather than describing the screen.

My report says their coverage is wrong. Look at the mapping first: an unplaced or ambiguous item is the usual cause, and it is yours to fix. If hours are genuinely missing, that is a timesheet-export problem: the hours are corrected in Zoho and HR uploads the export again (only HR uploads timesheets) — re-uploading the same export changes nothing, so it is always safe to try.

A month is settled and the number is wrong. Override it with a reason. Do not ask HR to re-close the period; a settled month is meant to hold still.

The evaluation screen shows no cycle. No cycle is open. HR opens them.

Nothing appears under my team. Your reports are read from the employee master. If somebody is missing there, they are missing here — HR owns that import.
